SYNTRONICS

Syntronics Limited is an affiliated company of Premier Group, which is a large industrial business house in Pakistan with diversified business activities.

We are one of the largest manufacturers of AD*STAR®, Polypropylene Laminated Block Bottomed Valve sacks in the world, which are primarily used for the packaging of cement. The facility was established in 1999 at Hattar, Pakistan with an annual capacity of 60 million sacks per annum. As the demand for the sacks increased due to its excellent characteristics and performance, the company carried out further expansions to cater for its ever-increasing customers base. Presently we are operating 4 integrated plants with an annual production capacity of 275 million sacks.

The above expansion was mainly due to the advantages of the AD*STAR® sacks over the prevailing KRAFT PAPER BAGS which was earlier the main packaging product for the

cement industry.

Syntronics is equipped with the latest state of the art machinery from STARLINGER, Austria and the plants are ISO 9001:2008 certified and accredited by the United Kingdom Accreditation Service (UKAS) and Lloyd,s Register Quality Assurance (LRQA).

Apart from servicing the local cement companies in Pakistan, Syntronics is also exporting AD*STAR® sacks to satisfied customers around the world. The demand for export is increasing fast as the major cement companies globally are converting their packaging into AD*STAR® sacks.

The company is actively engaged with STARLINGER & CO. Austria for the constant improvement of its product and shares its R&D with them. It is a matter of great pride and honor that Starlinger rates us as one of the best manufacturer of AD* STAR sacks in the world.

Characteristics of sacks offered by Syntronics:

- Brick Shape for Easy Handling and Compact Storage.
- Strong sacks having almost zero bursting
- Resistant to humid conditions
- Valve for easy filling
- Eco friendly
- Economical
- Recyclable and Reusable
- Excellent non fading printing, enhancing the packaging look.
- Cannot be tampered being hermetically sealed.
- Can withstand rough and multiple handling.
- Ideal for export where multiple handling takes place to and from load port to discharging port till final destination.

GREEN FUTURE

- AD*STAR® Sack is made of polypropylene which is environment friendly degradable thermoplastic polymer.
- When incinerated or put to waste it does not pollute air, soil or water with toxic residues.
- Empty sacks can be reused and recycled.
- Polypropylene is liable to chain degradation from exposure to heat and UV radiation such as that present in sunlight

Syntronics is a socially responsible entity which is committed to an Eco-Friendly green footprint future. Syntronics offers complete packaging solution for free flowing goods which are biodegradable and environment friendly.

REPLACING ONE KRAFT PAPER BAG AT A TIME

Applications

The cement industry is the largest user of AD* STAR sacks. The conversion from the traditional kraft paper bags is increasing rapidly. The common applications of the sacks are :

- All types of cement
- Calcium carbonate
- Master batches
- Cement mix
- Chemicals
- PVC compound
- Polymer granules
- Silica sand
- Mining products
- Wax products
